

DATA SHEET

74LVC16244A; 74LVCH16244A

16-bit buffer/line driver; 5 V
input/output tolerant; 3-state

Product specification

2003 Dec 08

Supersedes data of 2003 Jan 30

16-bit buffer/line driver; 5 V input/output tolerant; 3-state

**74LVC16244A;
74LVCH16244A**

FEATURES

- 5 V tolerant inputs/outputs for interfacing with 5 V logic
- Wide supply voltage range from 1.2 to 3.6 V
- CMOS low power consumption
- MULTIBYTE™ flow-through standard pin-out architecture
- Low inductance multiple power and ground pins for minimum noise and ground bounce
- Direct interface with TTL levels
- All data inputs have bushold (74LVCH16244A only).
- Complies with JEDEC standard no. 8-1A
- ESD protection:
HBM EIA/JESD22-A114-A exceeds 2000 V
MM EIA/JESD22-A115-A exceeds 200 V.
- Specified from -40 to +85 °C and -40 to +125 °C.

DESCRIPTION

The 74LVC(H)16244A is a high-performance, low power, low voltage, Si-gate CMOS device, superior to most advanced CMOS compatible TTL families. Inputs can be driven from either 3.3 or 5 V devices. In 3-state operation, outputs can handle 5 Volt. These features allow the use of these devices as a mixed 3.3 and 5 V environment.

The 74LVC(H)16244A is a 16-bit non-inverting buffer/line driver with 3-state outputs. The device can be used as four 4-bit buffers, two 8-bit buffers or one 16-bit buffer. The device features four Output Enables (\bar{OE} , \bar{OE}_2 , \bar{OE}_3 and \bar{OE}_4), each controlling four of the 3-state outputs. A HIGH on $n\bar{OE}$ causes the outputs to assume a high-impedance OFF-state.

The 74LVC(H)16244A is identical to the 74LVC16240A but has non-inverting outputs.

The 74LVCH16244A bushold data inputs eliminates the need for external pull-up resistors to hold unused inputs.

QUICK REFERENCE DATA

GND = 0 V; $T_{amb} = 25^\circ C$; $t_r = t_f \leq 2.5$ ns.

SYMBOL	PARAMETER	CONDITIONS	TYPICAL	UNIT
t_{PHL}/t_{PLH}	propagation delay nAn to nYn	$C_L = 50$ pF; $V_{CC} = 3.3$ V	3.0	ns
t_{PZH}/t_{PZL}	3-state output enable time $n\bar{OE}$ to nYn	$C_L = 50$ pF; $V_{CC} = 3.3$ V	3.5	ns
t_{PHZ}/t_{PLZ}	3-state output disable time $n\bar{OE}$ to nYn	$C_L = 50$ pF; $V_{CC} = 3.3$ V	3.7	ns
C_I	input capacitance		5.0	pF
C_{PD}	power dissipation capacitance per gate	$V_{CC} = 3.3$ V; notes 1 and 2 outputs enabled outputs disabled	12 4.0	pF pF

Notes

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW).

$$P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \sum(C_L \times V_{CC}^2 \times f_o) \text{ where:}$$

f_i = input frequency in MHz;

f_o = output frequency in MHz;

C_L = output load capacitance in pF;

V_{CC} = supply voltage in Volts;

N = total load switching outputs;

$$\sum(C_L \times V_{CC}^2 \times f_o) = \text{sum of the outputs.}$$

2. The condition is $V_I = GND$ to V_{CC} .

16-bit buffer/line driver; 5 V input/output
tolerant; 3-state

74LVC16244A;
74LVCH16244A

FUNCTION TABLE

See note 1.

INPUT		OUTPUT
nOE	nAn	nYn
L	L	L
L	H	H
H	X	Z

Note

1. H = HIGH voltage level;
- L = LOW voltage level;
- X = don't care;
- Z = high-impedance OFF-state.

RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
V_{CC}	supply voltage	for maximum speed performance	2.7	3.6	V
		for low voltage applications	1.2	3.6	V
V_I	input voltage		0	5.5	V
V_O	output voltage	output HIGH or LOW state	0	V_{CC}	V
		output 3-state	0	5.5	V
T_{amb}	operating ambient temperature	in free air	-40	+125	°C
t_r, t_f	input rise and fall times	$V_{CC} = 1.2$ to 2.7 V	0	20	ns/V
		$V_{CC} = 2.7$ to 3.6 V	0	10	ns/V

LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 60134); voltages are referenced to GND (ground = 0 V).

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
V_{CC}	supply voltage		-0.5	+6.5	V
I_{IK}	input diode current	$V_I < 0$	-	-50	mA
V_I	input voltage	note 1	-0.5	+6.5	V
I_{OK}	output diode current	$V_O > V_{CC}$ or $V_O < 0$	-	± 50	mA
V_O	output voltage	output HIGH or LOW state; note 1	-0.5	$V_{CC} + 0.5$	V
		output 3-state; note 1	-0.5	+6.5	V
I_O	output source or sink current	$V_O = 0$ to V_{CC}	-	± 50	mA
I_{CC}, I_{GND}	V_{CC} or GND current		-	± 100	mA
T_{STG}	storage temperature		-65	+150	°C
P_{tot}	power dissipation				
	SSOP and TSSOP package	$T_{amb} = -40$ to +125 °C; note 2	-	500	mW
	VFBGA package	$T_{amb} = -40$ to +125 °C; note 3	-	1000	mW

Notes

1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. Above 60 °C the value of P_{tot} derates linearly with 5.5 mW/K.
3. Above 70 °C the value of P_{tot} derates linearly with 1.8 mW/K.

16-bit buffer/line driver; 5 V input/output
tolerant; 3-state

Notes

- All typical values are measured at V_{CC} = 3.3 V and T_{amb} = 25 °C.
- For bushold parts, the bushold circuit is switched off when V_I > V_{CC} allowing 5.5 V on the input pin.
- Valid for data inputs of bushold parts (74LVCH16244A) only. For data inputs only, control inputs do not have a bushold circuit.
- The specified sustaining current at the data inputs holds the input below the specified V_I level.
- The specified overdrive current at the data input forces the data input to the opposite logic input state.

II	Preliminary data	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.
III	Product data	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN).

Notes

1. Please consult the most recently issued data sheet before initiating or completing a design.
2. The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.
3. For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

DEFINITIONS

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

DISCLAIMERS

Life support applications — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no licence or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.

Philips Semiconductors – a worldwide company

General description

The 74LVC(H)16244A is a high-performance, low power, low voltage, Si-gate CMOS device, superior to most advanced CMOS compatible TTL families. Inputs can be driven from either 3.3 or 5 V devices. In 3-state operation, outputs can handle 5 Volt. These features allow the use of these devices as a mixed 3.3 and 5 V environment.

The 74LVC(H)16244A is a 16-bit non-inverting buffer/line driver with 3-state outputs. The device can be used as four 4-bit buffers, two 8-bit buffers or one 16-bit buffer. The device features four Output Enables (1OE, 2OE, 3OE and 4OE), each controlling four of the 3-state outputs. A HIGH on nOE causes the outputs to assume a high-impedance OFF-state.

The 74LVC(H)16244A is identical to the 74LVC16240A but has non-inverting outputs.

The 74LVCH16244A bushold data inputs eliminates the need for external pull-up resistors to hold unused inputs.

[Back to top](#)

Features

[Hide](#)

5 V tolerant inputs/outputs for interfacing with 5 V logic
Wide supply voltage range from 1.2 to 3.6 V

CMOS low power consumption

MULTIBYTE™ flow-through standard pin-out architecture

Low inductance multiple power and ground pins for minimum noise and ground bounce

Direct interface with TTL levels

All data inputs have bushold (74LVCH16244A only).

Complies with JEDEC standard no. 8-1A

ESD protection:

HBM EIA/JESD22-A114-A exceeds 2000 V

MM EIA/JESD22-A115-A exceeds 200 V

Specified from -40 to +85 Cel and -40 to +125 Cel.
